## D3: Apportionment

## Group Activity

1. A college offers tutoring in Math, English, Chemistry, and Biology. The number of students enrolled in each subject is listed below. If the college can only afford to hire 15 tutors, determine how many tutors should be assigned to each subject. Examples adapted from David Lippman, http://www.opentextbookstore.com/mathinsociety/index.html
a. Hamilton's Method

| Subject | Students |  | Standard Quota |
| :--- | :---: | :---: | :---: |
| Math | 330 |  |  |
| English | 265 |  |  |
| Chemistry | 130 |  |  |
| Biology | 70 |  |  |
| Total |  |  |  |

Divisor
b. Jefferson's Method

| Subject |  | Students | Standard Quota |
| :--- | :---: | :---: | :---: |
| Math | 330 |  |  |
| English | 265 |  |  |
| Chemistry | 130 |  |  |
| Biology | 70 |  |  |
| Total |  |  |  |

Divisor
c. Webster's Method

| Subject |  | Students |  |
| :--- | :---: | :---: | :---: |
|  | Standard Quota |  |  |
| Math |  | 330 |  |
| English | 265 |  |  |
| Chemistry | 130 |  |  |
| Biology | 70 |  |  |
| Total |  |  |  |

Divisor
d. Hill-Huntington Method

| Subject |  | Students |  |
| :--- | :---: | :---: | :---: |
| Math Standard Quota |  |  |  |
|  |  | 330 |  |
| English | 265 |  |  |
| Chemistry | 130 |  |  |
| Biology | 70 |  |  |
| Total |  |  |  |

## Divisor

2. A small country consists of three states, whose populations are listed below.
A: 6,000
B: 6,000
C: 2,000
a. If the legislature has 10 seats, use Hamilton's method to apportion the seats.
b. If the legislature grows to 11 seats, use Hamilton's method to apportion the seats
c. Does the new apportionment seem fair? Why or why not?

| State |  | Population |
| :--- | :---: | :--- |
| A |  | Standard Quota |
| B | 6,000 |  |
| C | 6,000 |  |
| Total | 2,000 |  |
| Divisor |  |  |

3. Repeat problem 2 using Jefferson's method. A small country consists of three states, whose populations are listed below.
A: 6,000
B: 6,000
C: 2,000
a. If the legislature has 10 seats, use Jefferson's method to apportion the seats. What happens?
b. If the legislature grows to 11 seats, use Jefferson's method to apportion the seats
c. Does the new apportionment seem fair? Why or why not?

| State |  | Population |
| :--- | :--- | :--- |
| A | 6,000 |  |
| B | 6,000 |  |
| C | 2,000 |  |

Total
Divisor

## Quota Rule

The Quota Rule says that the final number of representatives a state gets should be within one of that state's quota. Since we're dealing with whole numbers for our final answers, that means that each state should either go up to the next whole number above its quota, or down to the next whole number below its quota.

Do any of our examples violate the quota rule?

## Class Activity

## The Three-Fifths Compromise and 1790 Census Data

4. In 1787, there was a Constitutional Convention in Philadelphia. The 55 delegates debated many issues and two of the most important were slavery and representation. Under the Great Compromise, the number of representatives per state would be determined by population size. But should enslaved African people, who had no rights in the United States, count as part of the population? Southern states said yes. Northern states said no. We will explore why.

The 1790 Census Data - The First US Census

| State | 1 <br> Total <br> Population | 2 <br> Free <br> Persons | 3 <br> Slave <br> Population | 4 <br> $3 / 5$ Slave <br> Population | Compromise <br> Pop Total | Number of <br> Reps to House <br> of Reps |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Vermont | 85,539 | 85,539 | 0 | 0 | 85,539 |  |
| New Hampshire | 141,885 | 141,727 | 158 | 95 | 141,822 |  |
| Maine | 96,540 | 96,540 | 0 | 0 | 9,6540 |  |
| Massachusetts | 378,787 | 378,787 | 0 |  |  |  |
| Rhode Island | 68,825 | 67,877 | 948 | 569 | 68,446 |  |
| Connecticut | 237,946 | 235,182 | 2,764 | 1,658 | 236,840 |  |
| New York | 340,120 | 318,796 | 21,324 | 12,794 | 331,590 |  |
| New Jersey | 184,139 | 172,716 | 11,423 | 6,854 | 179,570 |  |
| Pennsylvania | 434,373 | 430,636 | 3,737 | 2,242 | 432,878 |  |
| Delaware | 59,094 | 50,207 | 8,887 | 5,332 | 55,539 |  |
| Maryland | 319,728 | 216,692 | 103,036 | 61,822 | 278,514 |  |
| Virginia | 747,610 | 454,983 | 292,627 | 175,576 | 630,559 |  |
| Kentucky | 73,677 | 61,247 | 12,430 | 7,458 | 68,705 |  |
| North Carolina | 393,751 | 293,179 | 100,572 |  |  |  |
| South Carolina | 249,073 | 141,979 | 107,094 | 64,256 | 206,235 |  |
| Georgia | 82,348 | 53,284 | 29,264 | 17,558 | 70,842 |  |

## Counting the Total Population

a. Look at the total population (Column 1) of Massachusetts and North Carolina in the 1790 Census Data. Use a divisor of 32,150 people (for Jefferson's Method) to determine the number of representatives that Massachusetts and North Carolina would have.

Massachusetts: $\qquad$ Representatives

North Carolina: $\qquad$ Representatives Cara Lee

## Counting only Free Persons

b. Look at the number of free persons (Column 2) for Massachusetts and North Carolina. Use a divisor of 32,150 people (for Jefferson's Method) to determine the number of representatives that Massachusetts and North Carolina would have.

Massachusetts: $\qquad$ Representatives North Carolina: $\qquad$ Representatives
c. Why might including enslaved people as part of a state's population - even though they had no freedom or rights - anger states that had few or no slaves?

To break the deadlock between the states, the delegates agreed to count only 3/5 of enslaved African people towards representation. This agreement was known as the

## Three-Fifths Compromise

## The Results of the 3/5 Compromise

d. Calculate the missing values in Columns 4 and 5 for Massachusetts and North Carolina.
e. Use a divisor of 32,150 people (for Jefferson's Method) to determine the number of representatives that Massachusetts and North Carolina would have under the compromise. Then complete column 6 using the compromise column. There were a total of 105 representatives

Massachusetts: $\qquad$ Representatives North Carolina: $\qquad$ Representatives

## Your Thoughts:

f. Why do you think the South wanted to count enslaved people as part of their state's population? Why do you think the North did not?
g. Why didn't the delegates end slavery and make the enslaved people full citizens?
h. Was the $3 / 5^{\text {th }}$ compromise a fair resolution for slave states v . non-slave states? Why were the delegates so concerned about fairness when the enslavement of African people was not fair? Who else was not represented at the time?
i. For further exploration you can look up the slave trade compromise that was also made at the 1787 Convention.

## More Practice

1. A small country consists of six states, whose populations are listed below. If the legislature has 200 seats, apportion the seats using each method.
A: 3,411
B: 2,421
C: 11,586
D: 4,494
E: 3,126
F: 4,962
a. Hamilton's Method

| State |  | Population |
| :--- | :---: | :--- |
| A |  |  |
| B | 3,411 |  |
| B | 2,421 |  |
| C |  | 11,586 |
| D | 4,494 |  |
| E | 3,126 |  |
| F | 4,962 |  |
| Totalard Quota |  |  |

Divisor
