## Group Activities

1. Azavea, a data analytics organization, has calculated the efficiency gap for all 50 states. We will first look at the infographics together.
https://www.azavea.com/blog/2017/07/19/gerrymandered-states-ranked-efficiency-gap-seat-advantage/
2. You have just been hired as consultants to your state legislature in the re-districting of the state. To assess the current map below, tally the voters and calculate the efficiency gap.

Election Results:

Democrats win
$\qquad$ seats

Republicans win
$\qquad$ seats

| District | D <br> Votes | R <br> Votes | D Surplus or <br> Wasted Votes | R Surplus or <br> Wasted Votes |
| :---: | :---: | :---: | :---: | :---: |

5. Is this a fair map? Why or why not?
6. Now it is time for re-districting and you get to draw the lines. There are three rules:

## Rules

1. All legislative districts must contain the same number of people.
2. Districts must not be drawn according to race or ethnicity.
3. District must be contiguous - no split districts allowed
a. Use packing and cracking to win as many seats as possible for the Democrats and calculate the efficiency gap.

7. Now let's check proportionality.
a. Find the overall percentage of Democrats in the state, and the overall percentage of Republicans. Shade in the percentages in the overall population bar below.
b. Then shade in the number of seats won with each map.

7. Using the graph below, estimate the number of extra seats held by the majority party in the current House of Representatives.

Over-representation of majority party - measured in Congressional seats (compared with distribution of the votes)

## Fair or Proportional Representation

8. Divide the state into two larger regions so that one will elect 4 representatives and the other will elect 3 representatives. Try to make the representation as proportional as possible.
